"The TMK1 gene from Arabidopsis codes for a protein with structural and biochemical characteristics of a receptor protein kinase.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -!- FUNCTION: PROBABLE RECEPTOR.
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- TISSUE SPECIFICITY: FOUND IN MOST TISSUES.
-!- PTM: AUTOPHOSPHOSITATED ON SERINE AND THREONINE RESIDUES.
-!- PTM: AUTOPHOSPHOSITATED ON SERINE AND THREONINE RESIDUES.
-!- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
-!- SIMILARITY: CONTAINS 9 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Probon; Probon; Euk pkinase; 1.

COULD PLAY A ROLE IN DIFFERENTIATION SIGNAL. THE CRINKING (CR4) MUTATION AFFECTS LEAF EPIDERMIS DIFFERENTIATION SUCH THAT CELL SIZE AND MORPHOLOGY ARE ALTERED, AND SURFACE FUNCTIONS ARE COMPROMISED, ALLOWING GRAFFIERE FUSIONS BETWEEN ORGANS.

SUBCELLAR LOCATION: Type I membrane protein.

SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.

SIMILARITY: CONTAINS I THER-CYS REPEAT.

Blochim, Biophys. Acta 1208:65-74 (1994).
-1- CCFACTOR: HAVE SIGNIFICANTLY GREATER ACTIVITY IN THE PRESENCE OF MA2+ THAN MG2+.
-1- IISSUE SPECIFICITY: EXPRESSED IN ROOTS AND ROSETTES.
-1- PTM: AUTOPHOSPHORILATED ON SERINE AND THREONINE RESIDUES.
-1- SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
                                                                                                                                                                                                                                                                                                                                                                                                                        Leucine-rich repeat;

Submitted (OCT-1992) to the EMBL/GenBank/DDBJ databases.
-1- FUNCTION: PROBABLE RECEPTOR. INTERACTION WITH A LIGAND IN THE EXTRACELLULAR DOMAIN IRIGGERS THE PROTEIN KINASE ACTIVITY OF THE CATOPALASING DOMAIN.
-1- CATALITIC ACTIVITY: AIP + a protein = ADP + a phosphoprotein.
-1- SUBCELLULAR LOCATION: Type I membrane protein.
-1- SUBCELLULAR LOCATION: Type I membrane protein.
-1- TISSUE SPECIFICITY: EXRRESSED PREDOMINARLY IN THE SHOOTS AND ROOTS OF YOUNG MAIZE SEEDLINGS, AND TO A LESSER EXIENT IN THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        642

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 InterPro; IPR001480; B_lectin. -!- SUBCELLUIAR LOCATION: Type I membrane protein.
-!- SIMILARITY: TO PROTEIN KINASES IN THE C-TERMINUS. BUT DOES SEEM TO HAVE CONSERVED A KINASE ACTIVITY.
-!- SIMILARITY: CONTAINS 7 LEUCINE-RICH REPEATS (LRR).
                                             POTENTIAL.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                      The present invention relates to proline-rich extensin-like receptor kinase (PERK). The PERK nucleic acids and polypeptides are useful for increasing the resistance of plants to wounding and parhogens. These are also useful for producing transgenic plants with increased wounding and pathogen resistance compared with a wild type plant, as well as in assays for identifying and developing compounds to inhibit and/or enhance polypeptide
                                                                                                                                                          ö
                                                                                                                                          647;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      647

12
The invention relates to identifying target proteins comprising aligning and comparing nucleic acid or mains acid sequences from plant with nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         173
                                                                                                                                                                                                                                                                                                                                                                                                      114
                                                                                                                                                                                                                                                                                                                                                                                                                                          169

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         616
                  The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            520

The polypeptides or nucleic acids encoding them useful for identifying modulators. The identified modulators are useful as herbicides.

                                                                                                                                                                                                                                                                    146
                                    The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                 127

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
         and
                                                                                                                                                            The present invention relates to proline-rich extensin-like receptor kinase (PERK). The PERK nucleic acids and polypeptides are useful for increasing the resistance of plants to wounding and pathogens. These are also useful for producing transgenic plants with increased wounding and pathogen resistance compared with a wild type plant, as well as in assays for identifying and developing compounds to inhibit and/or enhance polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    114;
New proline-rich, extensin-like receptor kinase nucleic acids polypeptides useful for increasing plant wounding or pathogen resistance, or for producing transgenic plants with increased

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

The invention relates to identifying target proteins (ABB90790-ABB34016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value sequences are stactor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AKRLLVYEFVPNNNEELHLHGEGRPTMEMSTRLKIALGSAKGLSYLHEDCNPKIIHRDIK 401

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to identifying target proteins (ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to identifying target proteins (ABB90790-ABB9016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value sequences are selected. The polypeptides or nucleic acids encoding them execused in the polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 48
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3
